08159617030 • samuelokikijesu3@gmail.com • Ibadan, Nigeria

SUMMARY

Data Analyst II with 2+ years of experience in statistical modeling and business intelligence. Skilled in SQL, Looker, and dbt. Builds reliable data models that support operational decisions. Specializes in data warehousing and BI platforms, solving problems like metric standardization and manual logic removal to protect data integrity and compliance.

WORK EXPERIENCE

Statistics Intern

June 2025 – October 2025

University of Ibadan Microfinance Bank, Nigeria

- Owned the data validation process for large financial datasets. Used SQL to reach 100% accuracy in reporting and claims adjudication for bank programs.
- Built data models in Snowflake. Replaced manual logic with standardized metric definitions, improving reporting efficiency by 30%.
- Answered operational questions with dashboards in Looker and Metabase, giving visibility into the enrollment funnel and financial trends.
- Documented data sources and program-specific logic. Kept reporting compliant and standardized across cross-functional teams.
- Validated statistical models in Python and R. Informed benefit verification strategies and automated statistical reporting.

EDUCATION

Bachelor of Statistics in Statistics

Present

Federal University of Technology, Akure, Nigeria

ADDITIONAL SKILLS

Data Engineering & Warehousing: SQL, dbt, Snowflake, Data Warehousing, LookML, Data Modeling, Metric Standardization

BI & Analytics Platforms: Looker, Metabase, Power BI, Excel, RStudio, Quarto, R Markdown

Programming & Reporting: Python, R, agricolae, ReportLab

Statistical Analysis & Methodologies: GARCH-family estimators, ANOVA, PCA/EOF, Factorial Experimental Design, Cluster Analysis, Correlation and Path Analysis, SAS

Healthcare & Operations Knowledge: Claims Adjudication, Pharmacy Data, Benefit Verification, Prior Authorizations, Enrollment Funnel Analysis

PROJECTS

Audit the Dashboard — DSN AI Bootcamp 2026, Data Analytics Track

- Audited a 432-row retail transaction dataset, cleaning it to 420 valid rows by removing duplicates and fixing data-quality issues.
- Tested 8 management claims against the cleaned data. Found 7 incorrect and 1 misleading, including a profit figure overstated by ₦2,026,845 from blank cost fields read as zero.
- Rebuilt the dashboard in Power BI and Excel with corrected revenue, profit, and margin figures, and submitted a full audit reasoning sheet.

Efficiency of Asymmetric GARCH Estimators for Nigerian Naira Exchange Rates — Undergraduate Thesis

- Modeled Naira exchange rate volatility against USD, GBP, EUR, and CNY using eGARCH, GJR-GARCH, and TGARCH specifications.
- Found TGARCH the best-fitting model across all four currency pairs under Student-t innovations.
- Built the analysis in RStudio with rugarch, tseries, FinTS, and moments, and rendered the report through Quarto.

Spatial Analysis of Climate Extremes Across Nigeria

- Applied EOF/PCA to nine ETCCDI climate extreme indices, including TXx, TX90p, PRCPTOT, and Rx5day.
- Produced climatology maps, scree plots, EOF loading patterns, and PC score time series to trace spatial climate trends.

Comparative Genetic and Agronomic Analysis of Okra and Maize Varieties

- Ran ANOVA, means separation, and genetic parameter estimation (GCV%, PCV%, heritability, genetic advance) across multiple variety trials.
- Conducted correlation, path analysis, cluster analysis, and PCA in R with the agricolae package.
- Organized results by study objective into a structured report, generated directly from R Markdown.

Factorial Design Experiments

- Designed and analyzed 3^2 factorial experiments, including the effect of water temperature and stirring speed on sugar dissolution time.
- Ran an artisanal bread optimization study using the same factorial framework.
